Executive Summary

Aspiring Software Developer with strong proficiency in programming fundamentals and modern web technologies. Experienced in building responsive and user-friendly applications using ReactJS, Python, and database systems. Adept at problem-solving, collaboration, and continuous learning aligned with industry requirements. Committed to delivering efficient solutions and contributing effectively to development teams.

Technical Skills:

- Programming Languages: C++, C, Python, Java, HTML, JS, ReactJS
- Tools & Software: Git, Docker, Visual Studio Code
- Databases: MySQL, MongoDB, PostgreSQL

Soft Skills:

- Communication & Teamwork
- Problem Solving
- Time Management
- Adaptability
- Multilingual Abilities (English, Tamil)

Professional Experience:

AI-Powered Hospital Operations Dashboard April/2026

Role: Project Contributor

Responsibilities:

- Developed a predictive analytics dashboard using FastAPI, React, and PostgreSQL
- Implemented machine learning models including Random Forest for workload forecasting
- Built Monte Carlo simulations to optimize hospital staffing and scheduling strategies
- Integrated anomaly detection using Isolation Forest to identify operational inefficiencies
- Designed interactive dashboards using React and data visualization libraries
- Managed backend services and API development for real-time data processing
- Optimized database queries for efficient handling of large datasets

- Utilized version control and modular coding practices for scalable development

Impact:

- Enabled forecasting of hospital workload 24–48 hours in advance
- Improved operational decision-making through data-driven insights
- Enhanced monitoring of critical units such as ER, ICU, and surgery
- Delivered a scalable and responsive analytics platform

FoodRescue – Food Donation & Distribution Platform April/2026

Role: Project Contributor

Responsibilities:

- Developed a web-based platform using HTML, CSS, and JavaScript to connect food donors and receivers
- Implemented role-based authentication for restaurants and beneficiaries
- Built modules for posting donations, requesting food, and tracking availability
- Designed admin functionalities to manage users and distribution workflows
- Created responsive UI optimized for mobile and desktop devices
- Ensured efficient data handling and user interaction across modules
- Conducted testing and debugging to maintain application reliability

Impact:

- Facilitated real-time coordination between food donors and receivers
- Reduced manual effort in food distribution through automated workflows
- Delivered an end-to-end functional platform addressing food waste challenges

Awards & Accomplishments:

- Certified in Data Structures and Algorithm - Udemy
- Certified in Computer Networks - Cisco
